History: Notes of Case: Treatment: (*Continued.*)

Apr. 14 1903.

For about a week in the Spring she felt very ill and had pain down the p. arm to the finger tips – The Thumb back & front was especially painful.

May 15 an herpetic eruption came out over the arm. It extended from the shoulder down the radial side of the arm to the thumb where it was very bad.

It died away in about 2 wks.

From the time the eruption came out she lost power in the thumb. Since then the loss of power has gradually increased.

Otherwise healthy.

P.S. A large woman of 62. Looks about her age.

N.S.

Speech unaffected

No fits or other attacks

Signs of old herpes as hum ~~scars~~ spots with very little scarring. v. Fig.

Pain now in thumb back & front and down outside of arm & over acromial aspect of shoulder.

All weakness confined to p. arm & hand can flex terminal and basal joints of thumb. Extension of base of thumb seems impossible – Extension of terminal joint extremely bad, if at all.

Patient's Name ..... Reg. No. ..... Page ....

Date.

History: Notes of Case: Treatment: (*Continued.*)

Patient's Name, Reg. No. and the page to be accurately filled in on each sheet.

Flexion of wrist good & strong against resistance
Extension of wrist absent.
Flexion of elbow good when she can once be got to make the movement she shrinks on account of pain - Extension (triceps action) extremely feeble.

She is quite unable to lift the pain from the side and when it is lifted she cannot support it - It falls heavily. But when she makes an effort to support it the Deltoid can be seen to contract quite distinctly.

There seems to be some wasting of muscles about the shoulder but it is not profound. Supra & infra spinatus fair.

There is distinct limitation of passive movement at the shoulder joint due to changes in the joint. No other joints affected.

Touch & Pain felt everywhere.

Electrical reactions difficult on account of her extreme sensitiveness.

Faradism - Deltoid 0.
Biceps good
Triceps reacts - (long head anyhow)
Extensors - Slight reaction in middle finger only.
Flexors good
Interossei good.

outer Thumb muscles doubtful.

ate.

History: Notes of Case: Treatment: (*Continued.*)

Galvanism – Deltoid reacts with slow contraction
Triceps reacts
Extensors react
Thumb muscles no definite reaction
obtained prob: owing to difficulty in
Examination. This is one of the
tenderest places.

Pupils good
Sphincters good.

Rheumatoid arthritis both knees.

K. J. very difficult to obtain in consequence

On further examination I think there is
some Rheumatoid arthritis in joints of Lt thumb.

Patient's Name, Reg. No. and the page to be accurately filled in on each sheet.

Patient's Name ..... Reg. No. .....

Patient's Name, Reg. No. and the page to be accurately filled in on each sheet.

158. Barking Rd.

Dear Dr Head

Could you kindly give advice to Mrs Hall as to prognosis & treatment.

In May this year a herpetic eruption came out all over the "shoulder cap" & spread down the arm ran to the thumb & at the same time the power of the arm failed.

This loss of movement has increased till now the arm hangs as a dead weight.

9 wks ago Eruption came out over 9th.

Dorsal area.

The Pain came on at same time as Eruption. Not before.

Now profound scarring over 9th D.

Photographs

There is now the most Exquisite hyperaesthesia of exactly the type seen in visceral disease.

There is some deep scarring behind but the main part of the area is covered with pigmented stains.

Yet over this, the area in the photographs could be worked out with extreme accuracy just as in a profound case of visceral disease
